BASELINE OUT-OF-BOUNDS

Box - Screen the Screener

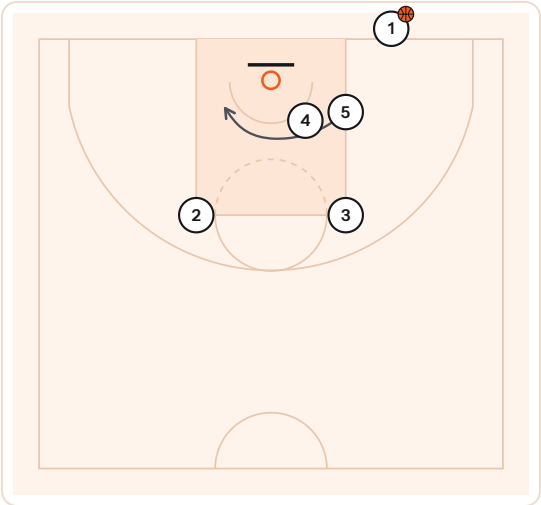

This baseline out-of-bounds (BLOB) basketball play uses a box alignment and a screen-the-screener action to free the original screener.

STEP 1 OF 6 · 1S

Cross-screen from the box

Baseline out-of-bounds setup: 1 is taking the ball out, 2 and 3 are at the elbows, and 4 and 5 are on the blocks. On the signal, 4 crosses the lane to screen for 5. Set the screen legally before the cutter arrives. 1 starts the inbound count with the ball ready.

STEP 2 OF 6 · 1S

Show the first scoring option

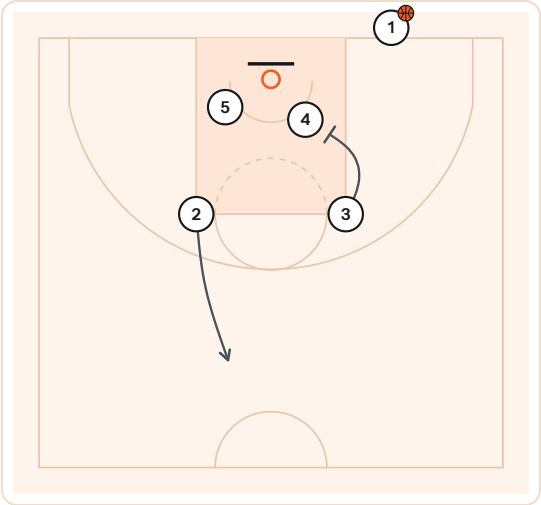

5 cuts tightly across 4 toward the left side of the rim and shows a target hand. 1 looks for this short scoring pass first. This example assumes the first cutter is covered, so 1 holds the ball and reads the next action rather than forcing the pass.

BASELINE OUT-OF-BOUNDS

Box - Screen the Screener

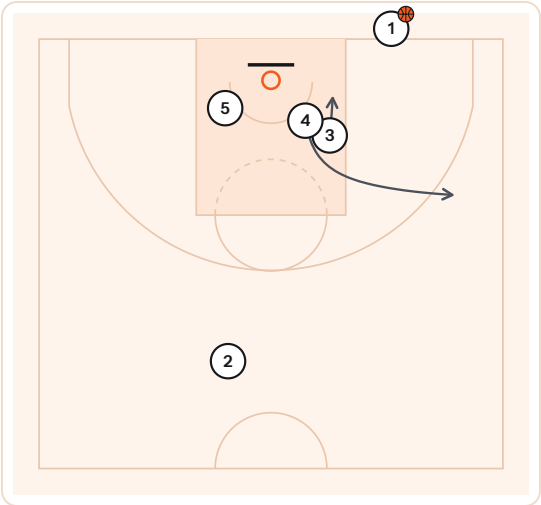

This baseline out-of-bounds (BLOB) basketball play uses a box alignment and a screen-the-screener action to free the original screener.

STEP 3 OF 6 · 1S

Screen for the original screener

3 steps down to screen for 4, the player who set the first screen. 2 lifts above the arc as the safety outlet. 4 waits until 3 has established position before using the screen. Keep the screening actions connected so the second option develops promptly within the inbound count.

STEP 4 OF 6 · 1S

Release to the wing

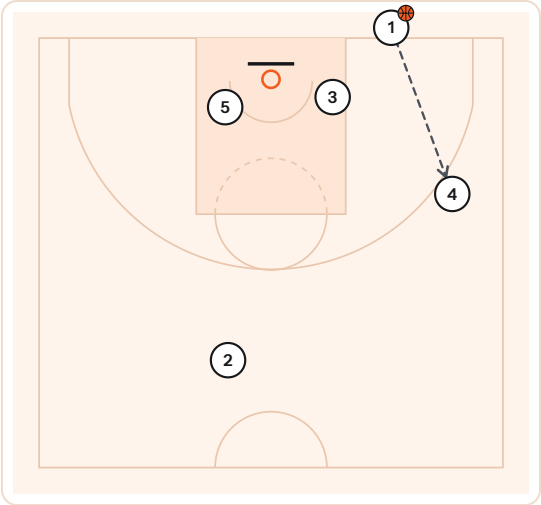

4 turns up the lane and cuts shoulder-to-shoulder off 3 to the right wing. Come out showing hands and ready to shoot. 5 holds the inside position for a possible seal or rebound. For teaching, the actions are separated into steps; in a game they flow together without long pauses.

BASELINE OUT-OF-BOUNDS

Box - Screen the Screener

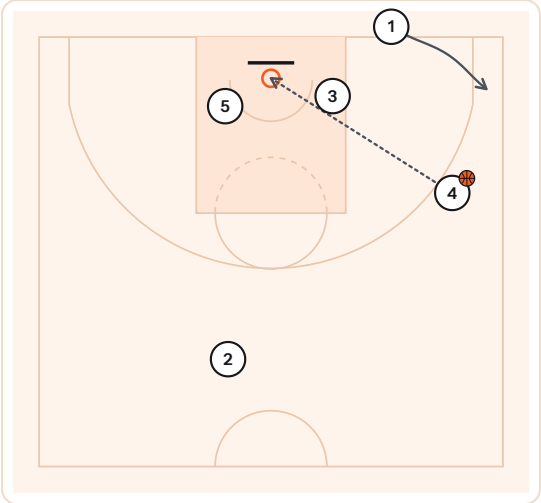

This baseline out-of-bounds (BLOB) basketball play uses a box alignment and a screen-the-screener action to free the original screener.

STEP 5 OF 6 · 1S

Inbound to the second option

1 passes to 4 on the wing, then steps in to the right corner. Deliver the ball to the receiver away from the recovering defender. If both scoring options are denied, 2 is the safety outlet; inbound safely before the five-second count expires and continue the offense.

STEP 6 OF 6 · 1S

Finish the screen-the-screener action

4 catches and takes the open shot. Prepare the feet before the catch and stay balanced. If the defender takes away the shot, face the basket and use the inside or perimeter outlet. The purpose of the sequence is to free the original screener after the defense reacts to the first cut.

What it creates

A scoring chance near the rim, followed by a safe outlet if the first option is covered.

When to use it

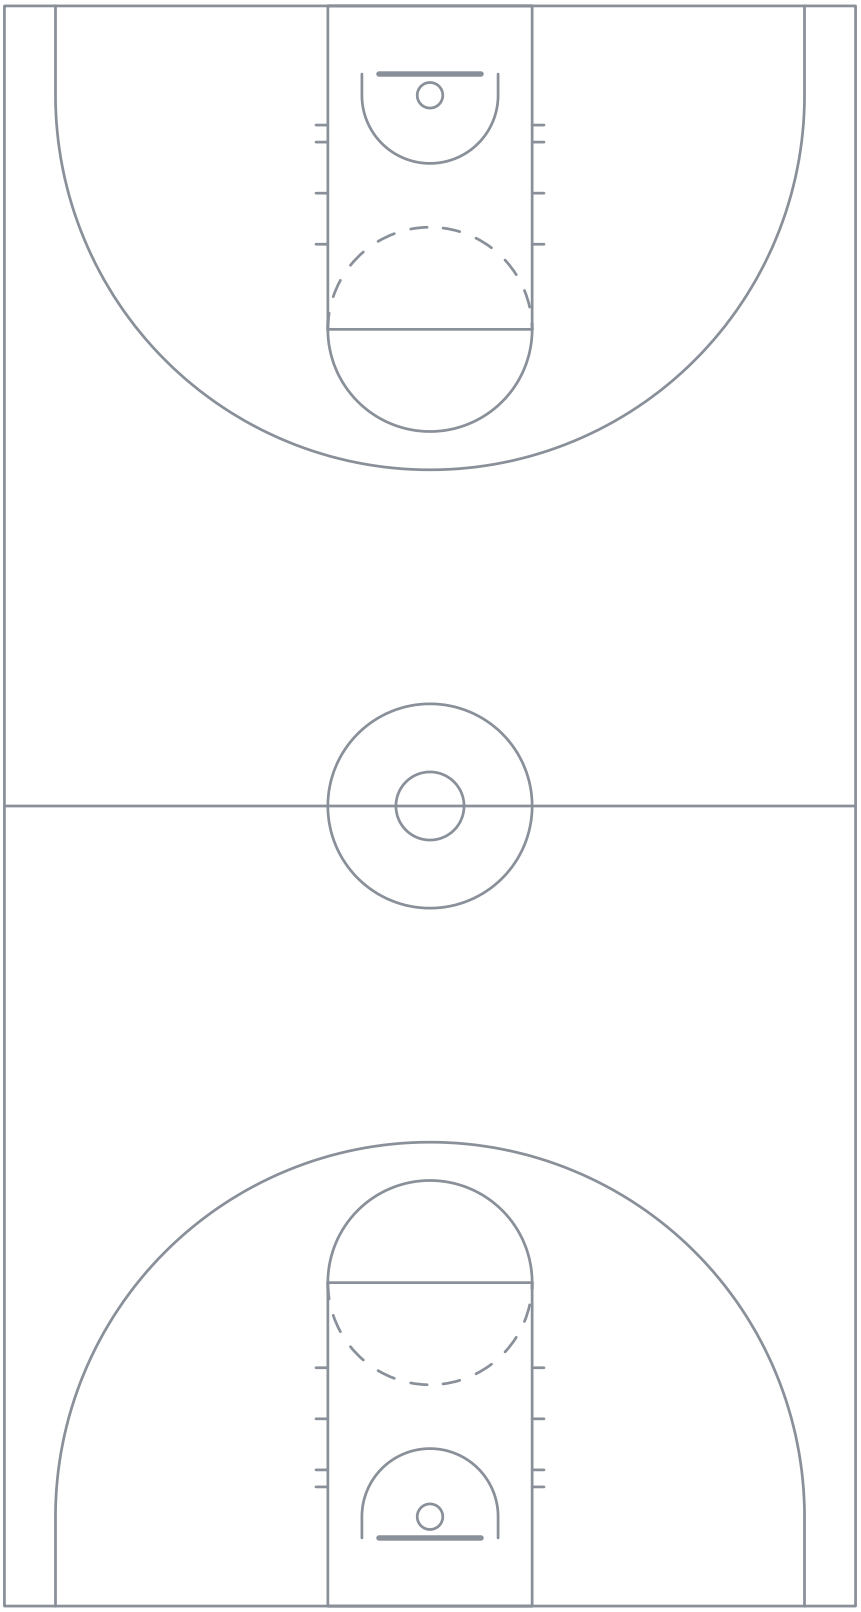

On a baseline out-of-bounds possession against man-to-man defense.

Key reads & teaching points

- Know the inbound count and identify the safety outlet before the ball is live.
- Set legal, stationary screens and time the second action after the first cutter clears.
- The inbounder reads the defense and takes the open pass rather than forcing a lob.
